## METALLIC RESOURCES HIRES NEW ACCOUNT MANAGER

### *Leader in Recycling and Solder Industries Strengthens Its Team*

**Twinsburg, OH** – Metallic Resources, Inc. is pleased to announce the recent hiring of Brian Schultz as its newest account manager. Brian Schultz comes to Metallic Resources with a wealth of high-level industrial experience, including servicing accounts of all sizes in the manufacturing industry. With new organizational changes made by Metallic Resources aimed at improving customer engagement and experience, Brian will have both purchasing and sales responsibilities.

According to new President Stanley Rothschild Jr., “Metallic Resources is very pleased and excited to bring Brian on board. He brings with him tremendous expertise which we are confident will greatly benefit our customers.”

Metallic Resources, Inc. has been recycling scrap solder through its state-of-the-art Electrolytic Refining System and improving solder since 1979. Thanks to its proprietary Electrolytic Refining System and our industry experts, Metallic Resources is home to the purest lead and lead-free solder in the world – including its patented SC995e™ non-silver, lead-free alloy (enhanced with cobalt) and Four 9’s® solder that is higher in quality and purity by a factor of ten times compared to any other solder currently available.

To power the Electrolytic Refining System, Metallic Resources pays customers top dollar for their scrap solder. In turn, the proprietary refining system results in solder exhibiting lower viscosity and surface tension in addition to greater fluidity – performance characteristics that not only dramatically reduce bridging, icycling, cobwebbing, flagging, solder voids and the need for re-work, but also increase desirable properties such as wetting and wicking. As a result, Metallic Resources helps its customers improve their profitability and their processes by delivering them the best solder at the most competitive prices in the industry.
